

Hiring Product Lead

Company Description:

GreenStack Software Solutions is a local incubated fintech company with a vision to change the way corporates manage day to day finance. Our goal is to meet the needs of customers who want a completely open environment from the ground up, with the flexibility to add what they want on top. In other words, Finance the way you want it. Currently, our focus is on developing a product for financial consolidation used by corporates to merge financials of subsidiaries at group level. This is just the beginning, and we plan to expand our foundation based on client requirements.

The Team:

Ours is a two person team who have gained considerable experience in their respective fields of finance and technology. Whereas one has over 10+ years of experience in accounting and consolidation, the other has similar experience in project management and managing derivatives and other financial products.

The Culture:

We are a vibrant young team located in the heart of Mumbai. Everyday work is fun, casual and relaxed. Above all, we are passionate about innovating superior products for our clients. We celebrate and seek out diversity of opinion in our team, we are open, to bold and disruptive ideas, and acknowledge and appreciate each other. We always strive for excellence and for the best solution, which is ultimately determined by the customer's needs.

Job description:

We want to hire smart people, not to tell them what to do; but so that they can tell us what to do. We need a kickass developer for our website. You say no to most features and always bring data to an argument. You are interested in being Product Lead of a fintech startup!

We are looking for a full-time Product Lead with experience and expertise to lead end to end product design, development and implementation, based on strategic priorities, customer feedback and industry experience. The role is based out of our Mumbai office.

Job Responsibilities:

Strategy, planning, and design :

- Take end-to-end ownership of the product, identify market requirements, define the product vision, create preliminary design concepts and shape overall technology and product roadmap by collaborating with the founders, business development, and marketing team
- Ensure user oriented design is the primary approach to product development across multiple screens, based on user behavior data and direct customer feedback
- Keep eye for technology and competitive landscape to stay ahead of the trends and competition

Implementation and deployment :

- Collaborate with team and customers to define use cases
- Creation of wireframes, site maps and user-flows for web and mobile applications
- **Code the front-end and back-end platforms yourself**

Operational management :

- Support marketing by implementing technical requirements for SEO/product analytics
- Establish and supervise a quality assurance process, including integration & system testing
- Rigorously monitor key performance metrics and coordinate with various teams to take corrective actions if needed
- Establish and forecast ROI of features and succinctly articulate competitive advantage

Requirements :

- Senior full-stack developer with 5+ years of experience in architecture design, product development, databases and UI/UX in consumer facing applications.
- BE/MS Computer Science degree from IIT/BITS Pilani/VJTI/Ivy League or other similarly reputed institutes
- Proficient in Java, J2EE, Javascript, Servlets, MySQL, HTML5, CSS3, XML
- Good knowledge of frameworks and platforms
- Experience with cloud computing an added advantage
- Creative self-starter who is comfortable with both taking initiative and working in teams
- Excellent recruiter to manage a team of 2-3 developers / designers / testers (over time)
- Strong communication skills
- Willingness to learn and utilize emerging technologies
- Sincere passion to change the world using technology

Job Perks :

- Competitive compensation
- Long hours, lots of learning
- Extremely flat hierarchy, no bureaucracy
- Meritocracy-driven, candid culture
- Fun, casual, relaxed and flexible work environment
